

THE WORLD'S BEST AND LATEST 4 TECHNOLOGIES IN SKIN CARE AT ONE DEVICE!

THE REVOLUTIONARY DEVICE AT SKIN CARE!
A GIANT SKIN CARE CENTER BY ITSELF!

Our OxyButton device is the latest development of CROSS and B2C MD technologies for skin care! It is the beauty care device that combines the 4 best technologies with the aim of finding a solution to the various skin problems that provide deep cleaning and care of the skin. These 4 technologies have 4 different handles and treatment products.

1- OXYHYDRA TECHNOLOGY

This is the medical care treatment which done with B2C MD concentrated special solutions and make the cleansing, moisturizing and antioxidant protection safely to the damaged tissue like stained, acne and the skin that has lost its elasticity. It provides excellent results. Thanks to the high content of these medical cosmetic solutions.

It is permanent, painless and fast application. Skin cleans with a special vacuum system. During this vacuum cleaning, the solution is sent at the same time with solutions containing active substances in liquid form. After this professional microdermabrasion, the high anti aging peptides and antioxidant serums absorbed to the skin.

OxyHydra technology uses 3 different concentrated serums and a special cleanser produced by B2C MD brand.

OxyHydra Solution S1:

It minimizes the color difference in the skin tone and provides a natural shine helps to free the skin from the sebums, free radicals and dead epidermis cells. It is perfect combination for skin cleansing.

OxyHydra Solution S2:

It helps to clean the clogged pores. Salicylic Acid, which is included in its contents, helps to stabilize the sebum and to purify the skin. The miracle content, contained in its content to helps the skin store moisture through Hyaluronic Acid.

OxyHydra Solution S3:

It is a great blend to reduce signs of aging and nourish the skin. The skin which has been cleaned and cared with S1 and S2 solutions, supported with deep cleansing and moisturizing of skin. Different contents helps skin; Vitamin A regulates keratinase, Hyaluronic Acid helps to moisturize the skin and its intensive Vitamin C helps support the production of collagen. In addition, the active ingredient in the content of Arbutin, makes the reduction of sunspots and skin tone irregularities are highly effective. It offers outstanding results after care.

2- OXYBUTTON TECHNOLOGY

This care application, which is inspired by the latest technology in the world; CO₂ (Carboxytherapy), provides the skin to be treated with natural methods by attracting pure oxygen Bohr Effect to this region as a result of million of micro bubbles.

Carbon Dioxide which is formed by special masks it gives a serious peeling effect on the skin to remove it provides absorption of strong active substances in the product, under the skin. It offers remarkable results in acne and spot treatments. It provides serious moisture support to the skin. OxyButton care treatment should be used with the single use special set of B2C MD. CapsuMD special disposable heads, which are pure carbonate active in the kit, should be used together with special CO₂ gel mask from the set. The carbonate on the head

and gel mask when come together and combined, a special reaction occurs in the skin and the million of CO₂ bubbles are generated. Again with this press and vibrations, these bubbles pushed under the skin. Oxygen in the blood increases and begins to revive. The result is based on the effect of the mask you have used. Treatment is terminated with Hyaluronic Acid moisture mask that comes out of the set after care. Two separate care kits available.

OxyBright (Stain Opener):

Spot treatment reduces pigmentation and syncs skin color and reduces side effects after sun. Also suitable for acne and problem skin treatments.

OxyRevive (Skin Replenishing):

It tightens skin, hydrates, reduces wrinkles and revitalizes skin. Also suitable for acne and problem skin treatments.

CapsuMD:

It contains Sodium Carbonate and Tartaric Acid. It provides in depth cleaning and shine.

Hyaluronate Collagen Sheet Mask:

It provides intensive moisture to skin after care and supports skin calm.

Bohr Effect:

It is the results of increased Carbon Dioxide pressure in the blood and the decrease of pH, oxygen dissociation phase shift to the right or release of the oxygen by hemoglobin.

3- OXPOLLAR (RF) TECHNOLOGY

OxyPollar head triggers collagen production by heating the skin between 37-41°C with using radio frequency waves, tightens the existing collagen fibers more and give the skin firmer and younger look. It is an indispensable technology for quick and powerful effects for skin care treatments. During application, the temperature on the skin is sensed by the sensor of the device. When the temperature is sufficient, the LED on the head changes the color and warns the operator. With this warning, no skin burns as with other RF devices. With OxyPollar RF application the skin instantly firms, looks younger and more alive. It reduces the appearance of wrinkles and reduce the wrinkles in regular use.

4- OXYCOSMO (NO NEEDLE MESOTHERAPY) TECHNOLOGY

OxyCosmo No Needle Mesotherapy is the latest and most effective method in skin-feeding technology. The ease of use gives confidence to the clients thanks to its medical appearance and high technology. Mesotherapy is the process of administering vitamins, minerals, amino acids, enzyme cosmetic products and drugs to the middle skin layer. It was applied by Dr. Michel Pistor in 1952 and was accepted by the French Medical Academy as a part of traditional medicine since 1987. It is still widely practiced all over the world. The first application was in the form of injection. However, nowadays mesotherapy with painful and bloody needle and often caused bruising in area, treatment could not be completed often. However after the advanced technology of OxyCosmo technology, mesotherapy applications with injection have become history.

The aesthetic problems of mesotherapy are useful in face mesolifting, under eye bagging, cellulite, regional lubrications, skin cracks and scarring treatments. No Needle Mesotherapy (OxyCosmo) works by electroporation. Micro channels formed by monopolar low voltage electrical current and the product prepared with the help of polarization are transferred to the target tissue through the skin. In the studies performed, No Needle Mesotherapy system has achieved more effective results since it provides are more homogenous product application then the needle method. In fact this system has been used as a method used to deliver cancer drugs in the treatment of cancer patients in advanced countries and it has been also used as a successful technique for mesotherapy too.

TECHNICAL SPECIFICATIONS

| | |
|----------------------|----------|
| OxyButton O++ | |
| Energy of RF: | 10-100 J |
| RF Frequency | 1 Mhz |
| Power | 10 w |

| | |
|------------------------|----------------------|
| Vacuum Power | 25 Kpa – 110 Kpa |
| Working Energy: | 100w |
| Screen: | 8.0 Touch Led Screen |
| Voltage: | 220V / 50Hz |
